The AfriCat Foundation
CONSERVATION THROUGH EDUCATION
namibia

THE AFRICAT FOUNDATION IS COMMITTED TO THE LONG-TERM CONSERVATION OF NAMIBIA'S LARGE CARNIVORES.

AfriCat's Programmes

REHABILITATION

AfriCat provides an environment for previously non-releasable large carnivores to hone their hunting skills in a 20 000-hectare (50 000 acre)(200 km²) nature reserve on Okonjima. Carnivores learn to become self-sustaining which gives them the opportunity to return to their natural environment. This programme also supports constructive research.

COMMUNITY SUPPORT & CONFLICT MITIGATION

AfriCat offers farmers a variety of effective techniques to better protect their livestock. We fund and construct robust kraals for protection at night and early morning, when 80% of predator-livestock encounters take place, encourage the use of herdsman to protect livestock during the day and manage grazing in a more sustainable way. These measures significantly reduce the loss of livestock, boosting the income of communities. This results in fewer instances of carnivores being shot, trapped or poisoned.

EDUCATION

AfriCat provides Environmental Education programmes which cover wildlife and sustainability, with a focus on the plight of carnivores. We teach young people & farmers the livestock management techniques tried and tested in our Community Support & Conflict Mitigation programmes, where the broader economic benefits, are evident.

RESEARCH

AfriCat supports an ongoing collaboration with researchers, scientists and the conservation authorities by working closely with farming communities, allowing for constructive research to take place in support of the long-term conservation of Namibia's predators.

CARNIVORE CARE

AfriCat provides a home, food and care for young, orphaned or injured animals until they can be rehabilitated and released back into the wild.
